About Me

I am a driven Computer Science and Engineering student with a strong passion for building practical, modern, and user-friendly digital products. I create responsive websites, explore mobile app development, and continuously sharpen my skills through real projects. I believe in disciplined learning, bold execution, and taking ownership of every challenge. My ambition is to grow into a capable software developer who can build impactful web and mobile solutions with confidence, creativity, and technical strength.

Projects

Departmental Portfolio

A web-based achievement management system built for a CSE department to record and showcase student and teacher achievements. The system includes secure admin authentication, achievement entry, public achievement display, responsive UI, and real-time data updates using Firebase. This project demonstrates my ability to build structured, useful, and presentation-ready web systems.

Tools Used: JavaScript, HTML, CSS, Firebase
Live Project: departmental-portfolio.vercel.app

Hallmate

An interactive Hall Management-based app where students get their hall payment by admin. The students get services and decide the outcome. This app includes a dashboard, information system, toggle to on/off meal, sound effects, background music, and Firebase integration, creating a complete and enjoyable user experience.

Tools Used: Java, XML, Firebase Auth, Realtime Database, Storage
